

MAP — Research, written for you.

An automated research tool for partnership & intelligence teams. Type a company, sector, or topic — get a sourced, board-ready report in about a minute.

THE PROBLEM

Before any outreach, someone has to read the filings, check the trials, pull the grants, and find the researchers. Today that is slow, manual, and expensive:

- **Hours per company.** Research across SEC, PubMed, NIH and ClinicalTrials can take a full day per target.
- **Sources are scattered.** Every data point lives in a different database and format, with no single view.
- **Numbers go stale.** Revenue, trial status and leadership change constantly — saved decks go out of date.
- **AI tools cost money and make things up.** Per-query fees add up, and generated text can't always be trusted.

THE GOAL

Give the team accurate company and partnership research in minutes instead of days — with **every fact traceable to a real source, no AI guesswork, and no cost per report.**

THE SOLUTION — ONE APP, THREE TOOLS

Company deep dive A full profile of any public company, built from its own SEC filings and live data.	Sector scan Type an industry — get the top companies in that sector, ranked and sourced.	UNC partnerships For any company, finds real overlap with UNC research, plus ready-to-send talking points.
---	--	--

Output comes ready to use: **Word, Excel, PowerPoint, PDF or Markdown** — take it straight into a meeting or to leadership.

HOW IT WORKS — FOUR STEPS, NO GUESSWORK

1. You type a name or topic

A company, a sector, or a research area. No account needed to try it.

2. MAP reads the public record

It checks SEC EDGAR, NIH grants, PubMed papers, and ClinicalTrials.gov — all at once.

3. A sourced brief assembles

Overview, financials, research alignment and partnership signals — built live, with citations.

4. You get a brief you can use

Download, share with leadership, or use it to draft outreach. Every line traces to a source.

LONG-TERM MAINTENANCE & COST

- **\$0 to run, per report.** No AI sits in the request path and no paid API keys are required — so there is no per-use or per-query fee.
- **Free public data.** Every number and citation comes from free government and research databases (SEC, NIH, PubMed, ClinicalTrials).
- **Hosting is the only recurring cost.** Standard low-cost web hosting; no expensive infrastructure or licenses.
- **Maintenance is light.** Upkeep is occasional adjustments when a public data source changes its format — not constant rebuilds.
- **Always current.** Reports are generated fresh each time, so the data is live rather than a deck that quietly goes stale.

Independent research tool. All data comes from public records. Reports are drafts for human review. Not investment advice. Not affiliated with UNC Chapel Hill.
