

MAP: Research, written for you.

An automated research tool for partnership & intelligence teams. Type a company, sector, or topic. Get a sourced, board-ready report in about a minute.

Aidan Colvin • June 24, 2026

THE PROBLEM

Before any outreach, someone has to read the filings, check the trials, pull the grants, and find the researchers. Today that is slow, manual, and expensive:

- **Hours per company.** Reading across SEC, PubMed, NIH and ClinicalTrials can take a full day per target.
- **Sources are scattered.** Each fact lives in a different database, in a different format. There is no single view.
- **Numbers go stale.** Revenue, trials and leaders keep changing. Saved decks fall out of date.
- **AI tools cost money and make things up.** Per-query fees add up. Made-up text cannot be trusted.

THE GOAL

Give the team accurate company and partnership research in minutes instead of days, with **every fact traceable to a real source, no AI guesswork, and no cost per report.**

THE SOLUTION: ONE APP, THREE TOOLS

Company deep dive	Sector scan	UNC partnerships
A full profile of any public company, built from its own SEC filings and live data.	Type an industry and get the top companies in that sector, ranked and sourced.	For any company, finds real overlap with UNC research, plus ready-to-send talking points.

Output comes ready to use: **Word, Excel, PDF or Markdown.** Take it straight into a meeting or to leadership.

HOW IT WORKS: FOUR STEPS, NO GUESSWORK

1. You type a name or topic

A company, a sector, or a research area. No account needed to try it.

2. MAP reads the public record

It checks SEC EDGAR, NIH grants, PubMed papers, and ClinicalTrials.gov, all at once.

3. A sourced brief assembles

Overview, financials, research fit and partnership signals, built live with citations.

4. You get a brief you can use

Download, share with leadership, or use it to draft outreach. Every line traces to a source.

LONG-TERM MAINTENANCE & COST

- **\$0 per report.** No AI runs behind it. No paid keys. So there is no fee per use.
- **Free data.** Every number and link comes from free public databases (SEC, NIH, PubMed, ClinicalTrials).
- **Free to host.** It is free to run today, and it always will be.
- **Light upkeep.** We only tweak it when a data source changes. There are no constant rebuilds.
- **Always fresh.** Each report is built new, so the data is live. Nothing goes stale.

Independent research tool. All data comes from public records. Reports are drafts for human review. Not investment advice. Not affiliated with UNC Chapel Hill.
